FIND THE PERFECT SOLUTION

Honeywell's Logistics Solutions are highly customizable and scalable to meet the needs of your business at any stage.

1. Honeywell Warehouse Management System

While branding and marketing still play an important role for the profitability of products or services, what's equally crucial these days is the efficiency of the operations and distributions processes of your warehouse.

To help you boost the accuracy, efficiency and productivity of your warehouse, our highly configurable Honeywell Warehouse Management System is designed with a user-friendly interface that enables you to automate logistics equipment and upstream and downstream systems to deliver the best for you and your customers.

Highly Integrated System
Seamless integration with existing external WMS and hardware.

Cloud Data Warehouse
Easily track and manage inventory and shipments with a centralised management.

Leading Technology Architecture
Leveraging top-notch Cloud architecture with enhanced security and data verification

Highly Configurable Software
Tailor-made to suit your warehouse and operational needs.

2. Honeywell SaaS Warehouse Management System for eCom

The Honeywell SaaS Suite of logistics and warehouse solutions are our answers to customers' demand for more affordable and one-stop solutions to solve multiple challenges.

We have embedded the industry's best practices into these cloud-based Software-as-a-Service solutions to ensure customers still get the full Honeywell Product Suite experience.

Benefits:

- Pre-Configured Processes
- Minimal customisation required thus minimising downtime
- Real-Time Order Tracking
- Stay up-to-date on the status of all orders
- Stock Accuracy and Transparency
- Keep track on the availability of products across all warehouses
- API with Major Marketplaces and Couriers
- Gain access to the most popular marketplaces and couriers
- Multiple Rules to Support Business Processes
- Pre-built interface with selected equipment such as LightBelt Putwall System, Voice, Electronic Weigh Scales etc.
- Support for Handheld RF and mobile printers
- Syncs and works seamlessly with most logistics equipment

3 Honeywell Transport Management System

Honeywell Transport Management System is an intelligent and visualized solution that was designed to ensure that you are able to meet the constantly growing supply and product demand of your customers. This comprehensive solution is packed with features that enable you to improve transportation resource management, route planning and optimization and seamless connection to mobile and WeChat applications.

With Honeywell Transport Management System, you will be able to increase productivity, handle freight and keep up with the constantly changing industry, all while maintaining the standard of customer service.

Intelligent Transportation Dispatching and Storage Management
Reduce logistic operations cost and improve dispatch effectiveness and transportation utilisation.

Order Execution and Transportation Process Visualisation
Intuitive dashboard to view real-time updates for order executions and operational data.

Transportation Process Management
Improve overall transportation efficiency with on-the-road tracking, route optimisation and more.

Collaborate with Upstream and Downstream System
Increase overall efficiency and collaboration of the logistics chain with seamless connection to upstream and downstream systems.

Integrate with Various Logistic Devices
Collect operational data in real-time and meet specific industries management requirements.

4 Honeywell Order Management System

Equip your business and workforce with the tools that will enable them to easily organize orders, improve overall operational cost-efficiency and ultimately deliver a seamless experience to customers with Honeywell OMS.

This solution provides you and your team with a centralized method to manage orders from all channels. When integrated with our Warehouse Management System, you will also gain multi-channel order allocation management as well as multi-sector collaboration.

Omni-Channel Order Management and Docking with Multiple Platforms
Enhance inventory management and information transparency and gain network inventory sharing for rational use for inventory.

Auto Consolidate and Split Order
Optimise order process and handle massive orders with automated splitting and consolidation according to preset rules.

Match Warehouse and Carrier Express Automatically
Improve order processing efficiency via rational use of warehousing and carrier express resources.

Collaborate Between Mutiple Departments and Multiple Roles
Improve operational effectiveness and collaboration between multiple departments.

5 Honeywell Data Exchange Platform (Datahub)

Data has now become an important asset to most businesses. Businesses that make full use of the data they have acquired are able to overcome most challenges and improve the services they provide to their customers. However, when your business expands, so does the amount of data, which you gain across multiple channels via different systems and platforms. Managing this data can turn into a massive challenge.

That's where Honeywell Datahub comes in. This data exchange platform aims to help your business streamline data exchange and integration between multiple systems by building an upstream and downstream communication collaboration. With it, not only will it only improve your supply chain efficiency but also makes the data collected easier to manage.

Data Exchange and Integration Between the Systems
Improve supply chain efficiency and collaboration by minimising system and information isolation.

Software and Hardware System Integration
Improve collaboration between equipment and efficiency of logistic equipment utilisation.

High Configurability Between the Systems
Reduce the difficulty of integration between systems

Multi-Customer, Heterogeneous System and Huge Data Processing Capability
Gain massive data processing and maintain high stability for system operation
